DETAILED ACTION***Allowable Subject Matter***

Claims 1-11 are allowed.

The following is an examiner's statement of reasons for allowance: prior art, U.S. Patent # 5,838,199 of Nakamura, does not teach nor render obvious an interconnection of active devices between the at least two capacitive elements configured to operate upon a transient charge flow as a current when in operation, wherein the charge flow is partitioned into at least two parts according to a controlling parameter; neither does it have a switched capacitor circuit connected on one end to another terminal of the cascode device and at another end to ground, and where the gate of the cascode device is connected to a bias voltage source, the switched capacitor circuit having a capacitor connected at one terminal to the source of the cascode device, and a switch connected at one terminal to the cascode device, another terminal connected to one end of a grounded current source, and yet another terminal connected to the common voltage source; nor does it have the switched capacitor includes a connection charge transferring circuit configured to utilize the charge transiently entering or leaving the switched capacitor circuit as an output parameter, retain this charge after a charge transfer, wherein the partitioning of the charge may have depended on an auxiliary input parameter; nor does it have a long tailed pair input circuit configured to operate over a finite time interval over which a specified current flows such that a prescribed finite charge has passed at the

end of this time interval, the circuit being configured to assess the total charge that has been partitioned as an output parameter during a finite time interval.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents # 5,905,399, # 4,912,423, # 4,345,213, and # 4,271,394 contain some limitations of the claimed invention.
